IDE	Visual Studio(2010,2015,2017,2019,2022), VSCode
Version Control	Github, Bitbucket, TFS
ORM	Entity framework core(6.0), Dapper
Cloud services	Azure
Payment Gateway	Stripe, Razor pay

PROJECTS

03-2022 **Contractor Services**– The aim of the solution is to create a website where contractors and home owners can register themselves and contractors can search works based on zip codes and services categories.

- Developed the web using code behind C# language in Microsoft Visual 2022 with .NET 6 and SQL server 2022.
- Created APIs and integrated those APIs into the web application.
- Integrated **stripe payment** gate way on API.
- Subscription plan-based payment.
- **Got multiple client appreciations for the project.**

12-2021 **Web scraping and data collection tool**– Worked on to create a web scraping tool where client can enter any website URL and it will extract the required data (including images) from that web URL then it will create a pdf as an end result. Apart from this there was another section where we have integrated a search engine using google, yahoo, yelp, yellow pages etc. APIs to get the data from this search engines and print a pdf of that search result. aim of the project was to create a solution which will be a DLL, Client can use it and plug it into their existing system.

- Developed the DLL using code behind C# language in Microsoft Visual 2022 with .NET 6.
- Developed customized PDF using PDF Sharp library.
- Integrated Google, Yahoo, Yelp, Yellow pages API's.
- **Got client appreciation for the project.**

06-2021 **ECommerce**– An ecommerce website caters to the exchange of goods and services for electronic transaction of money as well as Cash-On-Delivery (COD). Trading has been practised for a long time serving to the demand and supply chain. Ecommerce website, unlike the traditional websites, helps in purchasing the products that are displayed in the product lists. People can visit the website, choose the products they like, enter the required details, make payment (or choose to pay later), and purchase goods and services in a jiffy. Ecommerce website facilitates online transactions with the use of data and fund transfer. Earlier ecommerce was managed partially using phone calls and emails. However, today, all the processes can be done with a single website

- Developed web application using code behind C# language in Microsoft Visual 2019 with .NET MVC.
- Developed customized Dashboard. The purpose is to demonstrate value in what clients company is doing, like identifying growth areas, top selling product, month wise sales, top debtors, top creditors and much more.
- Single handedly designed UI using bootstrap 4,CSS3 to make it more attractive and mobile responsive at the same time.

01-2021 **ERP Systems**– The main purpose of an ERP system is to increase organizational efficiency of an organization by managing and improving how company resources are utilized. Improving and/or reducing the number of resources necessary without sacrificing quality and performance are keys to effectively improving business growth and profitability.

- Developed web application using code behind C# language in Microsoft Visual 2019 with .NET MVC.
- Developed customized Dashboard. The purpose is to demonstrate value in what clients company is doing, like identifying growth areas, top selling product, month wise sales, top debtors, top creditors and much more.
- Single handedly designed UI using bootstrap 4,CSS3 to make it more attractive and mobile responsive at the same time.

03-2020 **Mishra engg.** –This project fetches the requests submitted by android app user to database and then admin does further request and documents verifications

- Have developed web application using code behind C# language in Microsoft Visual 2017 with MVC.
- Developed UI with the bootstrap 4, and CSS.
- Fetched the requests from Mysql database

02-2020 **Ekamra College** – The purpose of this application was to automate the existing manual system by the help of full-fledged software, fulfilling the requirements, so that the Students can view study materials, Exam routine and important news related to their college, class, course in one place with a click of mouse.

- Have developed web application using code behind C# language in Microsoft Visual 2017 with MVC.
- Providing a better UI with the bootstrap 4, and CSS.
- Created Email notification service endpoint and also, involved in designing the email HTML templates.

- Proposed and implemented student's notifications System for Students as well as Faculties.

01-2020 [BirenMitra Womens College](#) –The purpose of this project is to build connectivity between students and faculties to reduce the manual work for conveying any information regarding to the college. It tracks all the details about the Posts, Shares and Photos etc.

- Used C# as backend and MSSQL For Database
- Implemented client side validations using JavaScript, jQuery.
- Worked on creating responsive website for smart devices using responsive design (**RWD**) and media queries based on CSS, HTML5, and **Bootstrap** Front-End Framework.

12-2019 [Private Security Agency](#)- The purpose of application is to automate the existing manual system by the help of full-fledged software, fulfilling the requirements, so that the user can apply for Licence, View ,Track Licence Status, get notifications and important news related to their License

- Used C#, VisualStudio2010, NETframework4.0, SQL2008r2 to develop part of website.
- Written Stored Procedures.
- MVP Pattern followed for Asp.Net MVP Application.
- Created and WCF Service Libraries to exchange data between Desktop and Central Application and implement business logic.

EDUCATION

2017-2019	Master of computer Applications (MCA), Fakir Mohan University, Balasore, OD
2014–2017	Bachelor of Computer Applications (BCA), Navapravat Academy for Management Education, Salipur, Cuttack
